

Diego San Millán is a diagnostic and interventional neuroradiologist. He was born in Madrid Spain in 1971. He is currently head of the Neuroradiology unit at the Valais Hospital in Sion. He obtained his MD from Geneva University, where he later worked in the Morphology Department. He completed his residency in radiology and his training in diagnostic neuroradiology at the Radiology department of Geneva University Hospital. Between 2006 and 2008 he completed a fellowship in interventional neuroradiology at The Johns Hopkins Hospital in Baltimore, Maryland. He became interested in the central nervous venous system early during his students years and extensively studied its anatomy. His thesis on the venous system of the base of the skull and cranio-cervical junction was awarded the Prize of the Faculty of Medicine in 2007. During his training and practice as a clinical neuroradiologist, one of his fields of interest has been to better understand the implications of the cranial venous system in neurological disease.
